Enhanced Fire Protection from Hörmann UK

Fire rated sliding doors from Hörmann UK offer the industrial and commercial markets first class fire performance together with functionality and style. Manufactured from steel and stainless-steel the single leaf doors are fully compliant to BS EN120 and BS EN240. Hörmann offer two options – the FST 120-1 BS fire sliding door offering 120 minutes of fire resistance and the FST 2410-1 BS providing 240-minute fire resistance.

Suitable for installation across a wide range of developments and industries the sliding fire doors have been manufactured to withstand heavy usage cycles and provide unrivalled durability and reliability. The doors are constructed with 72mm flush elements that result in a quality door leaf with parallel uniformed edges to create a contemporary aesthetic. Whilst a patented cylindrical track roller and stable roller track results in a precise door leaf guide with quiet operation and easy actuation.

The FST range of doors are available with a choice of additions including impact absorber profile guards and anti-collision bollards to ensure safety and long-service life. They can be fitted with a Hörmann FSA hold-open device which features a battery backup for reliable operation. They are also compatible with the Hörmann SupraMatic operator which provides fast, automated opening and closing, whilst the soft-start and soft-stop feature delivers quiet door travel. In case of fire, a patented compensator release system will unlock the operator enabling the door to be closed via weights.

Available in either Pearlgrain galvanised or smooth galvanised surface finishes, the doors are offered in a choice of 7 preferred colours including Flame red, Anthracite grey and Pure white, or any RAL colour of choice. They offer a modern, robust finish without compromising on fire performance.

Phil Thorpe, Industrial Projects Manager, “Our British Standards compliant fire sliding doors are a key addition to our extensive range of industrial doors. Not only do they offer excellent fire resistance, up to 240 minutes, they are also constructed from quality materials and offer a long and reliable service life, whilst aiding safe escape routes and building protection.”
