New Roller Shutter from Hörmann

Hörmann UK have announced the launch of their new Roller Shutter TD door, an entry level door which has been designed and developed specifically for use in agricultural, light industrial and commercial properties such as shop fronts.

Manufactured from robust galvanised steel, the TD roller shutter is available with either a solid or perforated profile. Tested and certified to BS EN 13241, the roller shutter is supplied with 'pull out' protection as standard and conforms to wind class 3 making it suitable for both external and internal installation.

The roller door is particularly suited for installation in space limited areas and can be fitted either in front, behind or within the building opening. It has been designed and developed to be quick and easy to install, together with providing simple operation. Space saving 60mm side guides can be either welded to the building or mounted using pre-prepared fixing points, whilst the tubular drive is operated via a press and hold operation which can be either surface or flush mounted. In the event of a power failure, the shutter door can simply be opened or close with a sunblind pole from the barrel side

When fitted the door has a standard safety catch which prevents uncontrolled unwinding of the curtain and security is assured by inbuilt features which make it difficult to pull the curtain out of the side guides.

The TD roller shutter can be supplied to a maximum width and height of 4000mm.
